

You don't need to print out this page to do it.

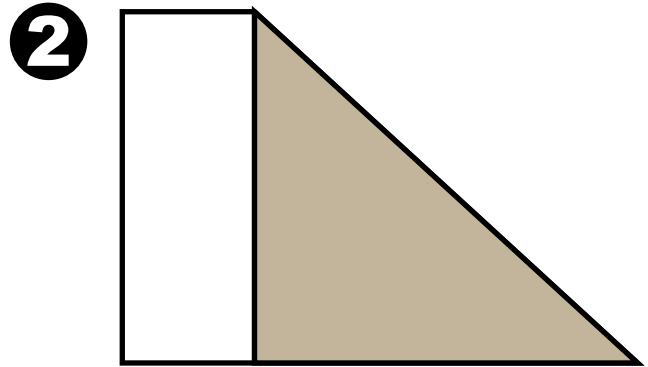

Make Square Paper

A lot of Origami uses square paper. But most paper we buy is longer than it is wide. There is a trick to make your paper square when you need it.

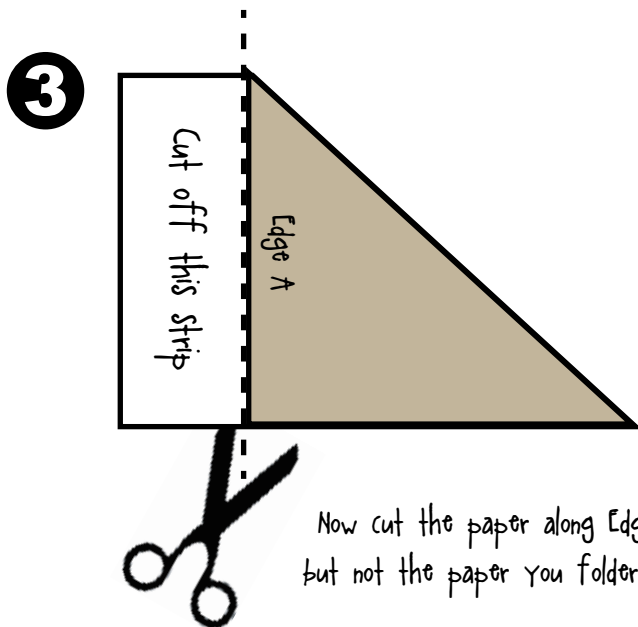

Note: In pictures below we made one side of the paper brown and left the other white, to show you how to fold the paper.

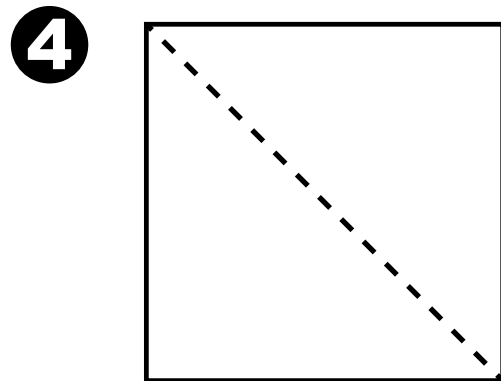

Fold down Edge A's right corner until you can line Edge A exactly with Edge B. And make a sharp point where the red circle is.

After you fold it, it should look like this.

Now cut the paper along Edge A but not the paper you folded over.

Unfold the paper. It should look like this. A square sheet of paper. Now you are ready for Origami!
